

## Drawing Wall Sections

As a class, we are going to draft a typical brick and siding wall section together. You will draw elements to the actual size to understand how a home is constructed.

1. Open up a Residential CAD Drawing file.
2. Following the teacher’s instruction. Draft the siding wall section using correct layers and sizes.
3. Copy the window section detail CAD file when needed to use in the section.
4. Draft the brick wall section as directed.
5. Set the wall sections up, side by side on an D-size sheet in Paper Space at 1”=1’-0”. “Break it” as necessary to fit.
6. Add notes and leader lines.
7. Fill out the title block.
8. Plot and turn in.
